Make Smarter Crop Decisions.

Get data-driven crop recommendations using soil and environmental conditions.

→ Start Prediction ▷ How It Works

Soil-based recommendations · Data-driven predictions · AI-assisted explanations

A clearer next crop
Built from conditions you control

ONE CLEAR WORKFLOW

Everything You Need for a Smarter Crop Decision

Purpose-built guidance from input to recommendation—without taking control away from you.

Data-Driven Prediction
Analyze N, P, K, temperature, humidity, and soil pH with a pre-trained crop model.

AI Explanation
Understand why a crop was recommended in simple, practical language—without changing the model result.

Prediction History
Review previous recommendations and the exact conditions used for every saved prediction.

Simple & Farmer Friendly
Comfortable inputs and clear guidance for farmers, advisors, and non-technical users.

HOW IT WORKS

From field conditions to a practical recommendation

Four transparent steps. Your measurements stay visible from start to finish.

01 **Enter Conditions** Add six soil and environmental values.
02 **Analyze** We validate and prepare your inputs.
03 **Get Recommendation** The ML model predicts the crop.
04 **Understand** AI explains the result in plain language.

Put your field data to work.

Review every value, get a model-backed crop prediction, and understand the result.

NEW PREDICTION

Find the Right Crop for Your Conditions

Enter your soil and environmental conditions to receive a data-driven crop recommendation.

All six values are required. You review them before prediction. 6 REQUIRED VALUES

Soil Parameters

Nitrogen (N): 90 mg/kg
Available nitrogen in the soil

Phosphorus (P): 42 mg/kg
Available phosphorus in the soil

Potassium (K): 43 mg/kg
Available potassium in the soil

Environmental Parameters

Temperature: 24.5 °C

Humidity: 82 %
Relative humidity at field level

Soil pH: 6.5
Measure of soil acidity or alkalinity

Values are used only to prepare this prediction.

Clear Form → Recommend Crop

Need Help Entering Your Values? OPTIONAL

Describe your field conditions naturally and let the AI assistant help organize the information.

"My soil has high nitrogen and moderate phosphorus. The temperature is around 25°C and humidity is about 80%."

Only explicit numeric values can be extracted. Missing values are requested, never guessed.

Assist Me

Use Current Weather OPTIONAL

Automatically use current temperature and humidity from your location.

Coimbatore, Tamil Nadu 24.5°C 82%
Updated 10:42 AM · Live weather

Use My Location

Weather fills only temperature and humidity and is never mandatory.

FORM STATES

Clear, accessible validation

Examples shown together for handoff. Error text always accompanies status color and icon.

Nitrogen (N): Enter value mg/kg
Please enter a value.

Phosphorus (P): forty mg/kg
Please enter a valid number.

Humidity: 124 %
Humidity should be between 0% and 100%.

Soil pH: 15.2
Please enter a valid soil pH value between 0 and 14.

Prediction remains unavailable until all required values are valid. → Recommend Crop

Review AI-Organized Values REVIEW REQUIRED

Only numbers explicitly supplied in your description were organized.

Temperature **25°C** · Humidity **80%** · Still needed: N, P, K and soil pH

CROP RECOMMENDATION

Rice

Recommended based on your provided conditions.

RECOMMENDED · 92% CONFIDENCE · WHEN AVAILABLE

Save Result · + New Prediction

Prediction saved to history ×

INPUTS USED

Conditions Used

The exact values reviewed before the model prepared this recommendation.

Nitrogen	Phosphorus	Potassium	Temperature	Humidity	Soil pH
90 mg/kg	42 mg/kg	43 mg/kg	24.5°C	82%	6.5

Why This Crop? AI EXPLANATION

The machine-learning model recommended Rice from the six values you supplied. Rice commonly performs well in warm, humid environments like 24.5°C and 82% humidity. Your pH of 6.5 sits in a suitable slightly acidic range, while the nitrogen, phosphorus, and potassium values provide a balanced nutrient profile for establishment and growth.

This explanation describes the ML result; it does not create or change the crop prediction.

Alternative Predictions

Shown only when model probabilities are available.

Maize	5%
Jute	2%
Cotton	1%

RESULT VARIANTS

SAVED PREDICTION — 27 Sep 2026 · 10:42 AM

RECOMMENDED CROP

Rice

92% CONFIDENCE

Conditions used

Nitrogen	Phosphorus	Potassium
90 mg/kg	42 mg/kg	43 mg/kg

Temperature	Humidity	Soil pH
24.5°C	82%	6.5

Why This Crop? AI EXPLANATION

The machine-learning model recommended Rice from your supplied conditions. The warm temperature, high humidity, slightly acidic pH, and balanced nutrient readings align with conditions commonly suitable for rice cultivation.

This is an explanation of the ML prediction, not a separate prediction.

Alternative predictions PROBABILITIES AVAILABLE

Maize 5% · Jute 2% · Cotton 1%

ABOUT CROPSENSE

Smarter Crop Decisions Start With Better Data.

CropSense combines agricultural data, a pre-trained machine-learning model, and AI-assisted explanations to make recommendations easier to understand—not harder to trust.

CLEAR BY DESIGN

A simple, non-technical flow

The prediction and explanation have distinct responsibilities at every step.

User Input → Validation → ML Model → Crop Recommendation → AI Explanation → Saved Prediction

OUR PRINCIPLES

Intelligence with clear boundaries

Useful assistance without hiding what is known, optional, or unavailable.

You stay in control
Review and edit all six values before prediction.

No fabricated measurements
Missing values are requested, never invented by AI.

Weather stays optional
Location weather can fill temperature and humidity only when enabled.
